

KEORAPETSE TLHAPANE

Data Analyst · Business Intelligence · Decision Science

keotlhapane011@gmail.com · +27 66 330 0304 · Centurion, Pretoria, South Africa · dabykeo.netlify.app

PROFESSIONAL SUMMARY

Results-oriented Data Analyst with demonstrated expertise in transforming complex, multi-source datasets into executive-ready intelligence that drives strategic decisions. Proficient across the full analytics stack — from data extraction and cleaning with SQL and Python, through statistical modelling and storytelling, to polished interactive dashboards in Power BI and Tableau. Proven ability to uncover hidden patterns, quantify business impact, and communicate findings to both technical and non-technical stakeholders. Currently deepening competencies in computer and information sciences with a focus on scalable, production-grade data solutions.

CORE COMPETENCIES

Analytics & BI	Power BI (DAX, data modelling) · Tableau · Excel (advanced)
Data Engineering	MySQL / SQL · Python (Pandas, BeautifulSoup) · R · ETL pipelines
Statistical Methods	Exploratory Data Analysis · Predictive modelling · Trend & cohort analysis
Soft Skills	Data storytelling · Executive presentation · Problem decomposition
Languages	English (fluent) · Setswana (native)

DATA ANALYSIS PROJECTS

MySQL Data Cleaning & Exploratory Data Analysis

Corporate Layoffs Dataset

- Designed and implemented a robust SQL staging environment to safely clean raw corporate layoffs data without altering source records, ensuring full data integrity throughout the pipeline.
- Applied Common Table Expressions (CTEs) and Window Functions to extract rolling layoff totals, rank companies by annual impact, and identify peak periods — producing board-ready trend insights.
- Reduced data inconsistencies by over 90% through systematic deduplication, NULL handling, and standardisation of company, industry, and date fields.

Tools: MySQL · CTEs · Window Functions · Data Cleaning

Excel Interactive Dashboard — Customer Bike Sales Analysis

End-to-End Pipeline: Raw Data to Insight

- Built an end-to-end Excel analytics pipeline transforming raw demographic survey data into a fully interactive dashboard with dynamic slicers and drill-down Pivot Tables.
- Identified key purchasing behaviour patterns by age, income bracket, commute distance, and marital status — enabling targeted marketing recommendations that increased simulated conversion rate by 18%.
- Implemented advanced data cleaning protocols and formula-driven data normalisation to ensure analytical reliability across 1,000+ customer records.

Tools: Microsoft Excel · Pivot Tables · Dynamic Slicers · Data Cleaning

Power BI Dashboard — Data Profession Survey Breakdown

Industry Intelligence Report

- Designed and published an interactive Power BI dashboard analysing salary benchmarks, job satisfaction levels, and demographic trends across the global data profession.
- Leveraged DAX measures and calculated columns to surface nuanced salary-to-satisfaction correlations, providing career-planning intelligence for junior and mid-level analysts.
- Applied best-practice UX principles to deliver a clean, executive-ready report layout accessible to non-technical stakeholders.

Tools: Power BI · DAX · Data Modelling · Survey Analytics

Tableau Dashboard — Airbnb Market Analysis

Real Estate & Short-Term Rental Intelligence

- Developed an interactive Tableau visualisation exploring listing price distributions, occupancy trends, neighbourhood hotspots, and seasonal demand patterns.
- Geo-mapped listing density and average revenue by ZIP code, surfacing high-yield investment zones and underperforming areas for property managers and investors.
- Used calculated fields and parameter controls to enable dynamic scenario modelling by price tier and property type.

Tools: Tableau · Geospatial Analysis · Calculated Fields · Parameter Controls

Python Data Extraction — Corporate Revenue Web Scraper

Automated Intelligence Pipeline

- Engineered a Python automation script using BeautifulSoup and Pandas to scrape, validate, clean, and export live corporate revenue data for the top 100 US companies into a structured, analysis-ready CSV.
- Implemented error handling, anti-bot delay logic, and field normalisation to ensure robust, repeatable data extraction with minimal manual intervention.
- Reduced data acquisition time from hours of manual research to under 3 minutes per run, directly supporting competitive analysis workflows.

Tools: Python · BeautifulSoup · Pandas · Web Scraping · Automation

EDUCATION

Bachelor of Computer and Information Sciences

Jan 2025 – Present

EMERIS RUIMSIG (formerly IIE MSA), Johannesburg

Core focus: IT principles, programming, database design, web development, mobile application development, and project management. Building a rigorous foundation in applied data systems and scalable software development.

National Senior Certificate (IEB Matric)

Jan 2019 – Dec 2023

Pinnacle College Copperleaf, Pretoria

Completed senior certificate at a leading Independent Examinations Board institution.
